

1 Noise Vector to Student-t Model

1.1 Input and Assumption Nodes

Input node: `var.epsilon`. Result node: `model.student_t_noise`.

1.2 Derivation

The Student-t observation model uses the noise vector ϵ in

$$y = X\beta + \epsilon, \quad \epsilon_i \sim t_\nu(0, \sigma).$$

1.3 Result

The noise vector is a required object for the Student-t observation model.
