

1 Gaussian Negative Log Posterior Derivation

1.1 Input and Assumption Nodes

Input node: `posterior.gaussian_conjugate`.

1.2 Derivation

Dropping constants independent of β , the negative log posterior is

$$\frac{1}{2\sigma^2}\|y - X\beta\|_2^2 + \frac{1}{2\tau^2}\|\beta\|_2^2.$$

1.3 Result

The result node is `objective.gaussian_negative_log_posterior`.
