

1 Gaussian Recovery Experiment Derivation

1.1 Input and Assumption Nodes

Input node: `validation.synthetic_recovery`.

1.2 Derivation

Run the validation over $n \in \{20, 50, 100, 250, 500\}$ and fixed random seeds, then summarize the empirical mean and standard deviation of e_n .

1.3 Result

The experiment generates `results/gaussian_recovery_summary.json` and `results/gaussian_recovery_error.png`.
